

Air Fan Controller Rebuild for ACC/ACU

EO Technical Solutions will not only repair but will also upgrade the unit. This translates into increased system up-times and maximum MTBF.

Rebuilding Process

- A complete evaluation is performed and high failure parts such as the controller are replaced
- Modifications to the ACC/ACU cabinet are made as necessary
- Unit is preprogrammed to nominal frequency

Testing

- After repairs/rebuild, the unit is tested to verify correct operation.
- Complete simulation of operational environment to ensure that unit is fully functioning
- Auto-start after a power cycle is verified
